

1. Header

Field	Value
Alert ID	75
Alert Name	SOC105 – Requested ThreatIntel URL address
Triggered (UTC)	March 7 th 2021 05:47 AM
Severity	High
Final Verdict	False Positive
Status	Closed

2. Executive Summary

On March 7th 2021 at 05:47 AM, a high severity alert was triggered when an internal device which was Marks phone accessed a shortened URL <https://bit.ly/TAPSCAN>. The intelligence flagged shortened links as potentially suspicious. I took the URL and analysed it in Virustotal sandbox and it came back as non malicious. The case was then closed as a false positive and no further investigation was done after that.

3. Alert Details

Attribute	Value
Detection	SOC105 Request ThreatIntel URL address
Source Address	10.15.15.12
Source Hostname	Marks phone
Destination Address	67.199.248.10
Destination Hostname	Bit.ly
Username	Mark
Request URL	https://bit.ly/TAPSCAN
Device Action	Allowed

4. Investigation and Triage

I analysed the shortened URL in Virustotal and the results showed one vendor flagged it as phishing but the majority of the report came back clean. Analysing it in the sandbox was my confirmation that there was no malicious activity. With all of that being done I determined that the alert is false positive.

5. The Intelligence

- 1.1 Shortened URL are commonly used in phishing campaigns to redirect destinations once clicked.
- 1.2 In this case, enrichment using virus virustotal confirmed the URL was false positive.
- 1.3 There was no evidence of malicious payloads or any redirecting was found.

6. Timeline

7. Indicators of Compromise

Type	Indicator	Context	
IPv4 Address	10.15.15.12	Source device(Marksphone)	
IPv4 Address	67.199.248.10	Destination address(bit.ly)	
URL	https://bit.ly/TAPSCAN	Request URL	

8. Impact and containment

No containment actions were required. The URL was documented as an artifact, and user awareness was recommended to reduce risks of shortened link usage in the future.

9. Conclusion and recommendations

Its confirmed it's a false positive. The shortened URL was benign. Recommendation: we need to educate users about the risks of shortened URLs and encourage verification before clicking them.
